**Esprida Corporation Provides Digital Check Corp. Scanners with Remote Management Capabilities**

*- Offers financial institutions enhanced control over self-service devices -*

**NORTHFIELD, Ill., May 6, 2009** – [Digital Check](#), a provider of desktop check scanners and remote deposit capture (RDC) technology to the financial industry, announced that it has partnered with Weston, Fla.-based [Esprida Corporation](#) to make its check scanners Esprida-enabled™, offering extensible remote management capabilities for financial institutions and partner service providers.

Remote management helps financial institutions to more effectively manage equipment such as check scanners both within and outside of their physical locations. Digital Check will now be able to provide banks and credit unions with extensive information on scanner status and usage by allowing remote access to diagnostic tools and image quality assurance (IQA) built into Digital Check's application programming interface (API). By leveraging the Esprida platform, Digital Check will be able to integrate with existing systems, such as a helpdesk application, offering extended management capabilities.

"Digital Check's continued innovation in remote deposit capture has sparked a transformation in the way financial institutions and their customers interact. By enabling remote management, Digital Check can effectively optimize its portfolio for continued advancement," said Anila Jobanputra, president of Esprida. "This partnership will contribute to the financial institutions' connected and open view of branch operational status, as well as equipment installed remotely."

"As remote deposit and branch capture grows in popularity around the country, financial institutions and RDC solution providers need ways to easily and efficiently manage their growing installation base of scanners and other equipment," said John Gainer, executive vice president for Digital Check. "From asset management to software updates, organizations need a process to easily manage, maintain and support their scanner customers so that they can use the technology as productively and frequently as possible. The alliance between Digital Check and Esprida meets this need for remote deposit capture users."

To see a live demonstration of Digital Check's [CheXpress® CX30](#) monitored by [Esprida LiveControl](#), visit booth #806 at [KioskCom Self-Service Expo](#), Mandalay Bay Convention Center, Las Vegas, on May 6 and 7.

Having control on usage and performance is critically important to implement effective preventive maintenance and minimize costly downstream exceptions handling. For example, remote monitoring can determine how many documents are processed per scanner, what types of maintenance or cleaning is needed and when ink cartridges need to be replaced.

**About ESPRIDA Corp.**

Esprida is a leader in remote device management. Financial services organizations, retailers, and government agencies use Esprida applications to transform their businesses and introduce innovative products and services to the public through the self-service channel.
